

TRAINING OF TRAINERS ACTIVITY BY TROYO & BEST

This training courses aimed at enhancing the young participants' awareness on marine hazards to endeavor a better understanding of marine hazards and their effects on human life and manmade coastal structures and discover tools for safety and preparedness.

This training will provide an opportunity to explore dangers of marine hazards for participants. It will offer practical tools and an experiential multidisciplinary learning journey supporting participants to engage with marine hazards and their effects on human life through non-formal education methodologies and tools.

TROYO and BEST training course gathers together youth leaders, Volunteers, and trainers of multidisciplinary studies from different countries. During the training course participants will find an opportunity to be trained by trainers, experts and professionals of coastal engineering. The training program will enhance knowledge and awareness of selected young people in the marine hazards and enable them to acquire new methods of preparedness against marine hazards and transfer the acquired knowledge directly to younger people through training activities.
